21X (21.finance AG)

Hiring Team – Engineering

Frankfurt am Main, Germany

Subject: Application for Software Engineer – Java Spring Boot & Digital Financial Markets (21X)

Dear Hiring Team at 21X,

I am writing to express my strong enthusiasm for the Software Engineer position at 21X. With a solid engineering foundation in designing and deploying scalable microservices with Java Spring Boot, building reactive frontends with Vue.js and TypeScript, and orchestrating containerized cloud infrastructure on AWS, I am excited by 21X's mission to pioneer the next generation of digital financial markets.

In my recent software engineering experience, I have focused extensively on building resilient, high-throughput microservices using Java 17/21 and Spring Boot. I have designed low-latency REST and event-driven architectures with Apache Kafka, implemented robust data layers with PostgreSQL and Redis, and collaborated with DevOps teams to deploy containerized workloads across Docker and Kubernetes (EKS). Quality and maintainability are core to my work: I establish automated test suites with JUnit 5, Mockito, and Testcontainers, ensuring exceptional stability in mission-critical environments.

Beyond backend microservices, I bring versatile full-stack capabilities with Vue.js and TypeScript, alongside hands-on Python experience for QA automation and AI setups. I take particular interest in improving developer productivity and internal setups through AI tooling and workflow automation. As a collaborative engineer fluent in English with conversational German skills (A2 / Grundkenntnisse), I thrive in dynamic teams that value architectural ownership, continuous learning, and technical craftsmanship.

21X's high-growth trajectory and innovative approach to digital asset infrastructure make this role an ideal match for my technical skills and passion for financial technology. I welcome the opportunity to discuss in an interview how my backend and microservices expertise can contribute to 21X's engineering goals.

Thank you for your time and consideration.

Sincerely,

Yakkshit
