Vagas.sc

Hiring Team – Engineering

Subject: Application for Senior Fullstack Python Developer (Vagas.sc)

Dear Hiring Team at Vagas.sc,

I am writing to express my enthusiasm for the Senior Fullstack Python Developer position at Vagas.sc. With extensive experience in architecting scalable Python backend web applications (FastAPI, Django, Flask), building modern reactive user interfaces with React and TypeScript, and orchestrating robust cloud deployments on AWS, I am excited by the opportunity to help elevate Vagas.sc's platform performance and user experience.

Throughout my career as a lead fullstack engineer and technical founder, I have owned products from technical design through production deployment. I have engineered high-throughput RESTful and GraphQL APIs, optimized complex relational database schemas using PostgreSQL and SQLAlchemy, and implemented Redis caching to eliminate performance bottlenecks. On the frontend, I craft intuitive, accessible user interfaces with React, Next.js, and TypeScript, ensuring seamless end-to-end integration and responsive design.

Beyond individual technical contributions, I place high value on engineering excellence and team collaboration. I actively participate in architecture planning, establish robust CI/CD pipelines and automated testing practices with PyTest and Jest, and mentor fellow engineers through constructive code reviews. Communicating fluently in professional English (with conversational German A2), I excel in cross-functional, distributed teams where product ownership, speed, and code quality are essential.

Vagas.sc's mission and technical challenges align perfectly with my fullstack expertise and enthusiasm for scalable systems. I welcome the opportunity to discuss in an interview how my Python, React, and cloud architecture skills can support your engineering roadmap.

Thank you for your time and consideration.

Sincerely,

Yakkshit
